Pilot Project

1. **Design web application with one text field and search button(similar to google) Use next js react payload cms etc…**
2. **Will have Postgres sql database which store sample question answers. (will be provided by us in pdf format which needs to be entered in db see attached far file..)**
3. **User will enter question from pdf in text of web application above. Following action should happen**
4. **Question will be passed on Claude haiku for intent detection and creating searchable item from it.**
5. **Searchable item will be passed on to carrying plain text search on Postgres db.**
6. **Once search result is out context builder code will work for remove unwanted data, manage tokens etc**
7. **Output of context builder will be passed on to Claude sonnet for generating answer in natural language and will be displayed on webpage as a response .**

Note: Claude pro membership will be provided by us.

Application needs to be deployed on railway cloud.
